

COOPERATIVE ECONOMIC INSECT SURVEY REPORT
Glenn A. Salsbury, Survey Entomologist

Report 11, Volume 57
September 18, 2009

BAGWORMS: First males were caught on 18 September.

ELM FLEA WEEVIL: One specimen was trapped in a Lindgren trap in Pratt Co. This is the first record for this county and the most western record for this insect in Kansas. All previous records were from Northeast Kansas. The trap had been set at a live plant dealer.

CAT and SQUIRREL FLEAS: An extreme infestation was found in a basement at a home near Galena. The great majority of the fleas were cat fleas. The homeowner got rid of the cats.

CAROLINA SAWYER: One adult emerged on 17 September from a white pine log.

BARK BEETLES: Adults of the granulate ambrosia beetle, shothole bore and eastern fivespined Ips are still being caught in Lindgren traps.
